

CLAIM: What we claim as our invention is the "ServerAlert". This unit is designed to improve restaurant service by providing an illuminated flashing table top unit. The unit is simple to use, extremely visible in dark or dimly lit rooms and easy to store.

PROJECT SPECIFICATIONS:

the project is designed to direct the attention of a restaurant server towards their customers. the unit would sit on the end or middle of a table which ever gives the server best visibility. when a customer is in need of service, they simply touch the alert button which lights the unit in a flashing signal for the server to see. when the server reaches the table they touch the light off. the unit would be made of a clear or colored transparent plastic shell that allows light to be emitted throughout the entire unit when flashing. for easy storage, the unit can be collapsed and stacked with other units.
